	maximal/m	6	6	6	6	6	6				

Technical modifications subject to change.

### Development and special productions

The program above represents our standard program of delivery. These pipes are available from the current production and are permanently checked by our quality assurance unit.

Basis for a particularly continuous quality and for a high productivity is the production equipment designed by us. The technology bases on the production of a lap-welded aluminium pipe, to which the inner and outer plastic layers are applied by means of an adhesive layer.

Regarding individual pipe dimensions, special lengths and material mixtures we offer our long years of experience. Apart from the fields of sanitary and heating installations, other areas of application in the food industry, the automotive and medical technology as well as in the chemical industry are possible with special materials. Development orders are, of course, treated confidentially and we guarantee exclusive protection for our customers.
